
EMPLOYMENT**Software Engineer** **Erias Ventures** **Aug. 2025 – Present**

- Developed a Python-based acceptance testing framework that validates Kubernetes workloads, platform services, and logging pipelines using asynchronous, dependency-aware DAG execution
- Refactored packaging and distribution for Python applications using uv workspaces and Hatch, publishing versioned wheel packages to an internal repository for use across on-prem and cloud deployments
- Rebuilt a Linux-based cluster configuration wizard in Python using Textual, replacing the legacy Urwid interface and adding features that improved reliability and usability
- Developed and maintained CI/CD pipelines for on-prem and cloud deployments, supporting custom Rocky Linux-based Kubernetes environments and AWS infrastructure built around EKS

Software Engineer III **Cohesity** **Sep. 2023 – Aug. 2025****Software Engineer II** **Dec. 2021 – Sep. 2023**

- Automated deployment, configuration, and upgrades of on-prem Kubernetes workloads using Helm, integrating Sentry and ELK for monitoring and logging
- Developed a scalable Python-based unit test framework and results platform using Django, GraphQL, and PostgreSQL, processing thousands of product-code tests per day
- Designed and implemented a Python/MongoDB Priority Queue Manager to regulate infrastructure load, reducing downtime and improving engineering throughput
- Refactored and maintained the ELK stack and Python-based Actions Framework, enabling automated failure response and improved visibility into CI/CD failures
- Authored and maintained Bazel BUILD files for product code and internal tooling, using caching and remote execution via Buildfarm to reduce build and test times while simplifying dependency management

Software Engineer I **Lockheed Martin** **Feb. 2021 – Dec. 2021**

- Deployed and scaled a Rancher-managed Kubernetes cluster, configuring cluster networking for a highly available DevOps platform
- Automated server provisioning, configuration, and application deployment using Ansible, Jenkins, and Git
- Upgraded and maintained critical services including Artifactory, Jenkins, Gerrit, and HAProxy in a classified production environment

Software Engineer, Intern **Lockheed Martin** **May 2020 – Jul. 2020**

- Integrated OpenSCAP security compliance tooling into the interactive installer of a custom Linux operating system
- Deployed Jenkins and implemented CI/CD pipelines to automate build and test workflows for the custom Linux environment

Full Stack Engineer, Intern **BMW Group** **Jan. 2019 – Aug. 2019**

- Developed full-stack features for internal enterprise applications using C#, ASP.NET, Angular, and SQL Server
- Containerized an enterprise application and deployed it to Docker Swarm, improving availability and scalability
- Designed and implemented Azure-based CI/CD pipelines to automate application build, test, and deployment workflows

EDUCATION AND CERTIFICATIONS**Tuscaloosa, AL** **University of Alabama** **Fall 2016 – Dec. 2020**

- B.S. in Computer Science, December 2020. GPA: 3.77/4.0
- Certified Kubernetes Administrator (CKA), June 2024

TECHNICAL SKILLS

- **Languages & Scripting:** Python, Bash, C++, Rust
- **Cloud & Platform:** Kubernetes, AWS, EKS, Linux, Docker, Helm, Flux, Terraform, Ansible, Ceph
- **Build & CI/CD:** Bazel, Bazel Buildfarm, Jenkins, Git, Artifactory, uv, Hatch

- **Backend & Data:** Django, GraphQL, PostgreSQL, MongoDB
- **Observability:** Grafana, Loki, ELK
